## DETAILED ACTION

This Office Action is in response to the election filed 28 May 2002.

### ***Election/Restrictions***

Claim 12 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method of making a semiconductor device, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 8.

Applicant's election without traverse of claims 1-11 in Paper No. 8 is acknowledged.

### ***Drawings***

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description:

Fig. 5, # 50

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the security paper

Art Unit: 2822

must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 1-11 disclose a memory element that has a non-programmed and programmed state, a first and second electrode interconnected in the non-programmed state, a bridge partly interrupted in the programmed state and a conductor track. A programmed and non-programmed state does not give definition of structure itself and needs to be fixed more of the structure state. It is unclear what the memory element is or whether the memory element is the conductor track or if it includes the conductor track and/or the bridge. The drawings include the memory element to have a spiraling or meandering shape but in the drawings it shows the conductor track has the spiraling or meandering shape. Also it is unclear whether the conductor track and bridge are the same thing. The claims disclose the bridge as a conductor track but the drawings show the conductor track and bridge as different elements.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-11, as far as understood, are rejected under 35 U.S.C. 102(e) as being anticipated by Chang et al. (U.S. Patent 6,59,842).

Chang discloses integrated circuit (Fig. 2) that contains a laminate substrate (10) comprising of a porous layer (18) and a covering layer (12) with a metal layer (14) formed thereon.
